DVS9755z DVD Player

Problem: I am using an audio/video source (VCR, TV Tuner, etc...) to go into the Audio/Video input on this unit. I can hear it because I have it on analog one but I can't see the movie. What am I doing wrong?

Solution: You will need to press the V.SRC button on the remote control so that it will change the video to the outside source. It will read V-OUT on the display. When you go back to INTERNAL and you can't see the video, press the same button (V-OUT) and it will change it over to V-IN.
