Subject:	VMA1131 / VMA1041 Laptop Interface		

Description:

When using either of these two units with a laptop computer, you must make sure that the resolution settings are correct. To adjust the resolution of a windows OS computer, open control panel, then display, and then select the settings tab and change the resolution to match the monitors capability. Make sure the user selects external VGA output on the laptop.

- Note: Some laptop video drivers will not support driving both the internal display and an external one at the same time.

VMA1131 Supports both 800 x 600 & 640 x 480 resolution

VMA1041 Only supports 640 x 480 resolution
