

The VMA1131 is our 11.3” LCD Monitor and looks good right out the box.

We have had some calls in the Tech Department about how to make it brighter. We here use a DVD Player to “Fine Tune” the adjustments of the screen. People who are buying this monitor have either a portable DVD

Player or home unit and convert it to 12 volts. The DVD that we use is called “DVD Video Essentials”. This will help you tune all your monitors in your multimedia system. This is also a great audio tuning disc also. You can pick up this disc on the Internet at www.kencranes.com.

If you have any questions please call the Clarion Tech Department and we will help you out.
