

VRX6671z

We have some calls in the Tech Department about this new unit. Many people are putting the video for either there VCP or there DVD player into this Yellow Video Input RCA Jack on the back of the unit. They then noticed that they have no Video on the screen. Why is that? Here is why. The Yellow Video Input Jack on the back of the unit is for **use with the CeNet Video source (TTX7501z)**. To get a video on this unit from a non-CeNet device you will need a CCA-389 **A/V input** cable. Plug this cable in the back of the unit where the CCD port is.

If you have any questions please call the Clarion Tech number and we will be able to help you out.
