1. Precondition: Smartphone compatibility

a) Ensure the compatibility of your phone with Smart Access feature: access to the list from the link “Compatible Devices”.
   For Android
   For iOS

b) Check your smartphone Operating System compatibility
   - For iPhone
     - iOS 6 or later
   - For Android smartphone
     - Android 4.0 or later
     - Bluetooth profile: HID and SPP
2. Multimedia unit setup: select the Smartphone OS

a. Press the “Menu” button

b. Touch “Settings”

c. Touch the General settings icon

d. Choose “iPhone” or “Android”
3. Bluetooth pairing setting

a. Touch the Bluetooth icon

b. Touch "Set"

c. Touch "Add"
d. Select "Hands free + Smartphone Linking" as connection type

e. Device Name and passkey is displayed on the waiting screen
Search for Bluetooth devices from your Smartphone and select the displayed device name

f. Select "pair" on your Smartphone.
Then touch "OK"
4. Activate Smart Access from your Smartphone

First, check the Smart Access operating procedure page to know how to install Smart Access on your smartphone.

To use the Smart Access in your car, first activate the application.

Pairing is complete

g. Telephone mark and smartphone mark is displayed
When utilising the Smart Access app for the first time, a welcome message is shown at the bottom of the smartphone display.

You need then to physically connect your smartphone to the multimedia unit, in order to let the system synchronize first. This operation may take a few minutes.

Then a code will appear, confirming that your system is ready for use. You can now start enjoying Smart Access in car.
5. How to start using Intelligent VOICE

a. Push the “Smart Access” button

b. Touch “OK”

c. Touch [Check] button.
If you check the "Do not display again" box, this dialog will not appear from next time.
Intelligent VOICE is a function which is using a mobile data communication. When you start using Intelligent VOICE, the multimedia system downloads the latest Intelligent VOICE software from the server.

When using it for the first time, download of the application starts automatically. It is likely that the system displays this screen or a black screen during a short while.
6. Intelligent VOICE: Search a place

a) POI search

EXAMPLE! Search for a pizza restaurant.

"I want to eat a pizza"

"Pizza Eat" was found. Highly recommended.

"Take me there"

The destination has been set. Please drive carefully.
b) Check POI details

“I want to eat a pizza”

“Pizza Eat” was found. Highly recommended.

“Show me”

I will display the detailed information
c) Call a POI

“I want to eat a pizza”

“Pizza Eat” was found. Highly recommended.

“Show me”

I will display the detailed information

“Make a call”

Calling Pizza Eat

Calling
7. Intelligent VOICE: “Do you mean” function

It may happen that the voice command is ambiguous to the system, and that you are not fully understood immediately. You can easily display the list of candidate words that the system identified when receiving the last voice command, and select the most appropriate word or sentence without needing to talk again.

*I am looking for a “Conference centre”, but the result is not what I expect...*
Press the little arrow next to the voice command result.
8. Intelligent VOICE: Sending a SMS

This function is available for Android phones. Talk to the device, it will lead you...

9. Intelligent VOICE: Make a call

Simply tell the system the name of the person you want to call. It will look through your contacts list and dial for you.
10. Intelligent VOICE: Emails

You can either receive or send emails with Intelligent VOICE. You need first to set up both the smartphone and the multimedia unit.

a) Smartphone set up

NB: this setting is necessary for using the Gmail send / receive function, as well as the Google calendar.

Open the Smart Access App

Select “Installed”
Select “Intelligent VOICE”

Application outline

Google Voice Search Function Combined with Cloud Realized Recognition Rate and Hit Rate Higher Than Ever Before.
By utilizing “Google Voice Search Function”—boosting its tremendous recognition rate—and cloud, the new search system realized the voice search precision higher than ever before.
You can quickly and directly find the best destinations from Google’s huge amount of up-to-date information through the cloud server of “Smart Access”.

QY-1220E-A

Login via your Google account.

- Use Mail on the In-Car Device.
- Use Google calendar on the In-Car Device.
- You can continue to use the favourites and history information that have been recorded on Intelligent VOICE even after changing your smartphone model.
You need to connect with a Gmail address.

Once your Gmail address is informed, pick up the contacts you want to associate.

Only emails from these contacts will appear in Intelligent VOICE.

Note: Once logged in, if you have not informed the “email settings”, you will not be able to receive any email, but you still can send Gmals
b) Multimedia unit set up

Make sure that the Multimedia unit settings allow you to receive emails.

Press the “setting” icon

Press the arrow to continue...

Make sure that the “Mail” function is “ON”
11. Intelligent VOICE: Check Google Calendar

a) Inform Gmail address in Intelligent VOICE app.

To activate the access to your Google calendar, you need to follow first the same procedure as shown above in 10. Intelligent VOICE : Emails.

Open the Intelligent VOICE app from your smartphone, open the configuration page and make sure that your Gmail address is informed.
When the multimedia unit is turned on (when you start the car engine), the system will sync and review all events planned into your calendar. The system will inform you by push information about the events planned within the next coming 12 hours. Calendar events can also be used to set the destination, as long as the address has been informed in the calendar.

b) Activate the event information “push” function

Press the “setting” icon

Press the arrow to continue...

Make sure that the “Calendar” function is “ON”
12. Intelligent VOICE: Activate battery level alert

The system can inform you by push when your smartphone battery reaches a low level.

![Notifications ON/OFF](image)

Make sure that the “Smartphone battery” function is “ON”

13. Connection trouble

While using Intelligent VOICE, you may get an “error” or “time out” message. Such trouble happens to appear in case of bad data connection. Make sure that you are located in an area with wifi, 3G or 4G proper coverage, and call again the Intelligent VOICE function by pressing the Smart Access button.
