Financial Highlights

Profile

Since its establishment in 1940, Clarion Co., Ltd. has been an innovator in creating advanced products that connect automobiles with music and information.

Since entering the car audio equipment field by introducing Japan's first dedicated passenger car radio in 1951, we have broadened our product range to include safety supporting camera systems and such in-vehicle information communication devices as car navigation systems, among others.

Clarion celebrated its 70th anniversary in 2010. Over the years, the environment in which Clarion operates has undergone dramatic change, including the advent of new social communication networks and electric vehicles.

Applying our unique ideas and advanced technologies, we will develop new domains to forge even stronger links of sound and information communication in the mobile environment. In the process, we will continue to raise the levels of safety, security, comfort and excitement in all that we provide to our customers throughout the world. All the while, Clarion will keep striving to enrich society by delivering valuable products that meet the growing need of people to enjoy more seamless interaction with the sound and information that they want.
